EAC External Practical – Enterprise Architecture Diagram Reference

Prepared as a student reference for the five problem statements: TOGAF Healthcare, TOGAF Banking, Hospital UML/SysML diagrams, and a hypothetical organization's enterprise architecture.

How to use in EdrawMax: Open EdrawMax → New → Blank Diagram → Insert → Image (or Import) → select the required SVG. SVG keeps the diagram crisp when resized. To edit individual shapes, use EdrawMax's SVG conversion / ungroup option if available in your version; otherwise recreate using the labels and connectors as a reference.

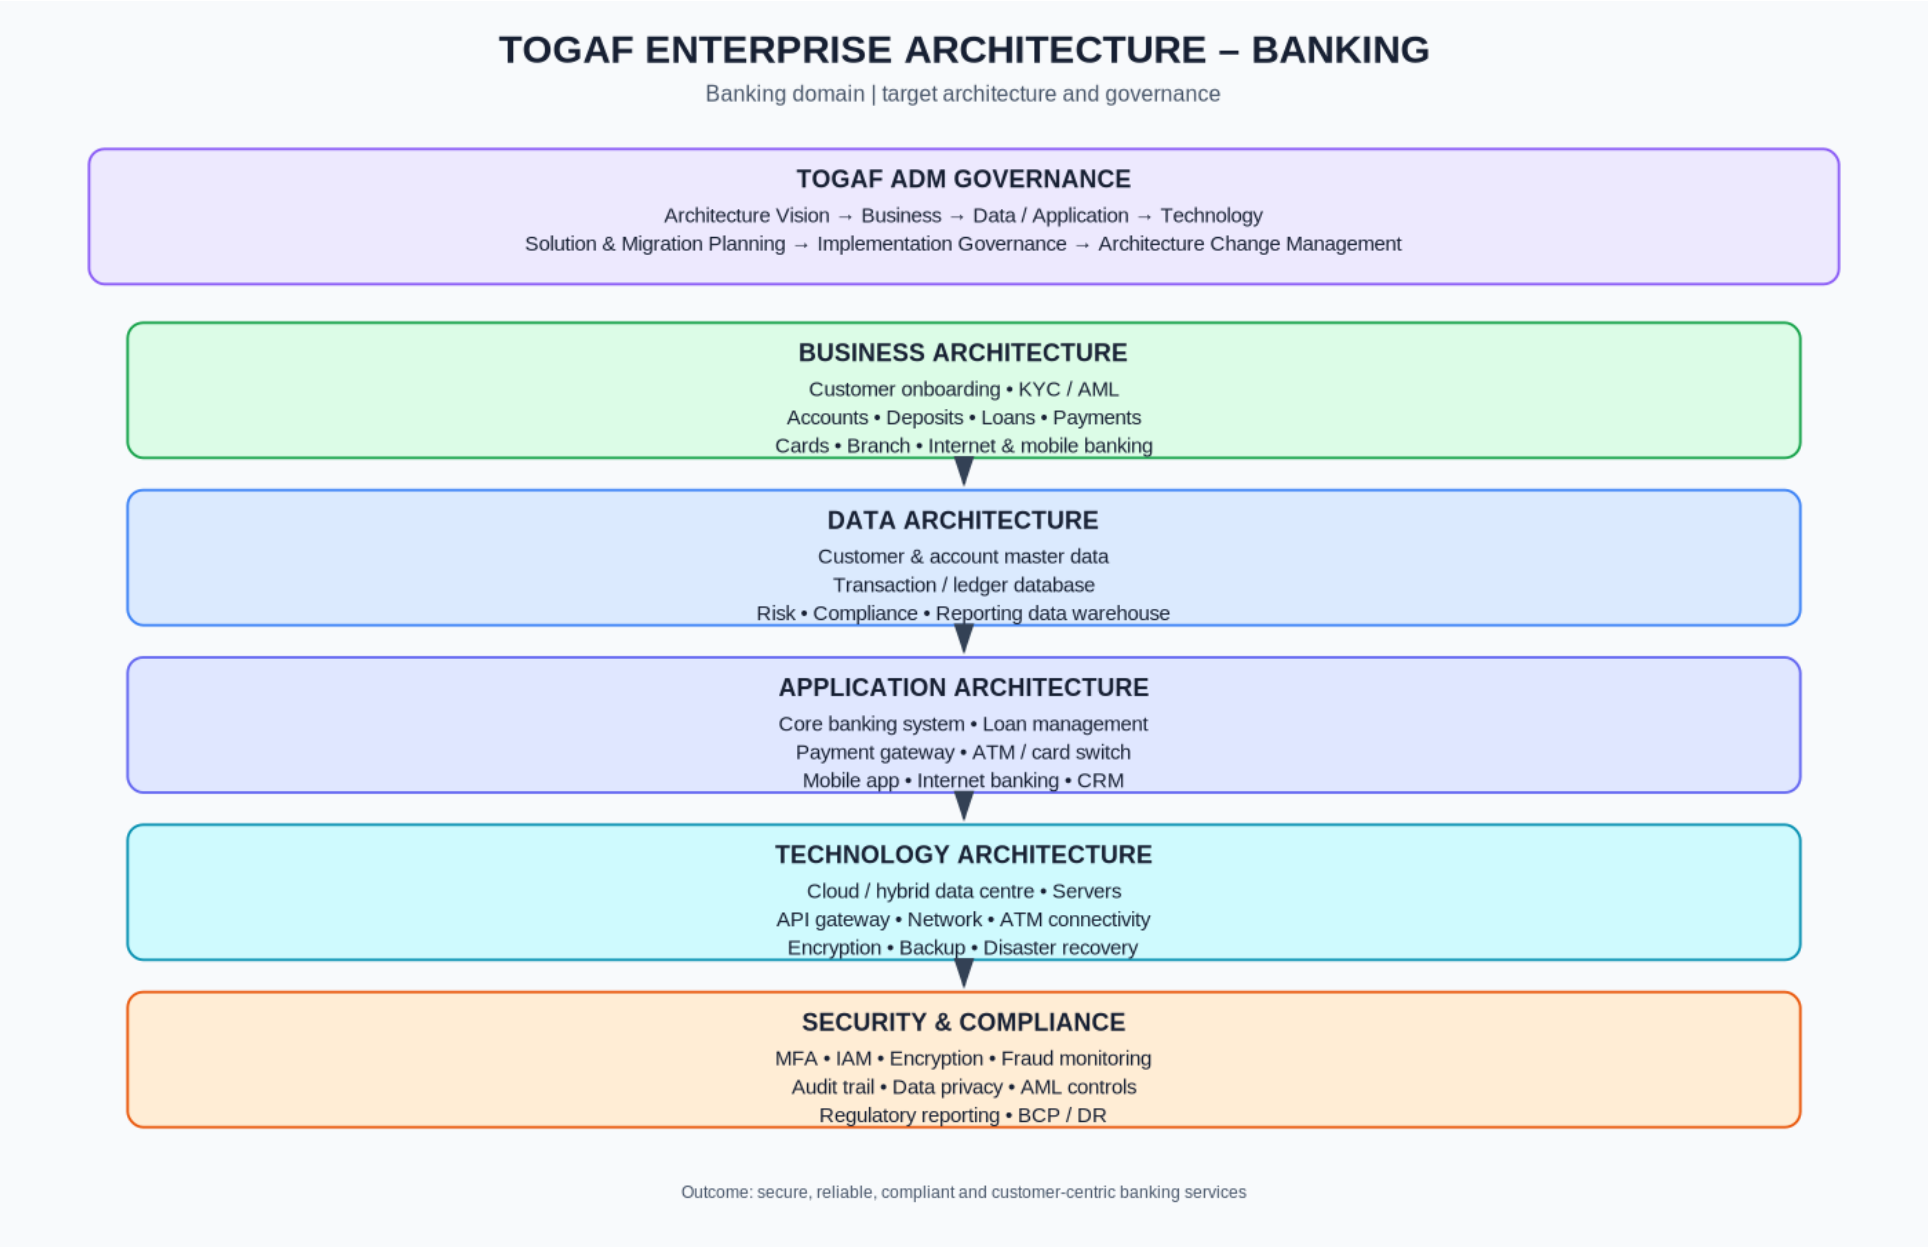

Exam tip: Label each layer, show directional arrows, and explain the purpose of each architecture component. TOGAF is a method/framework (ADM) used to develop and govern the architecture; it is not just a technology stack.

1. TOGAF – Healthcare Domain

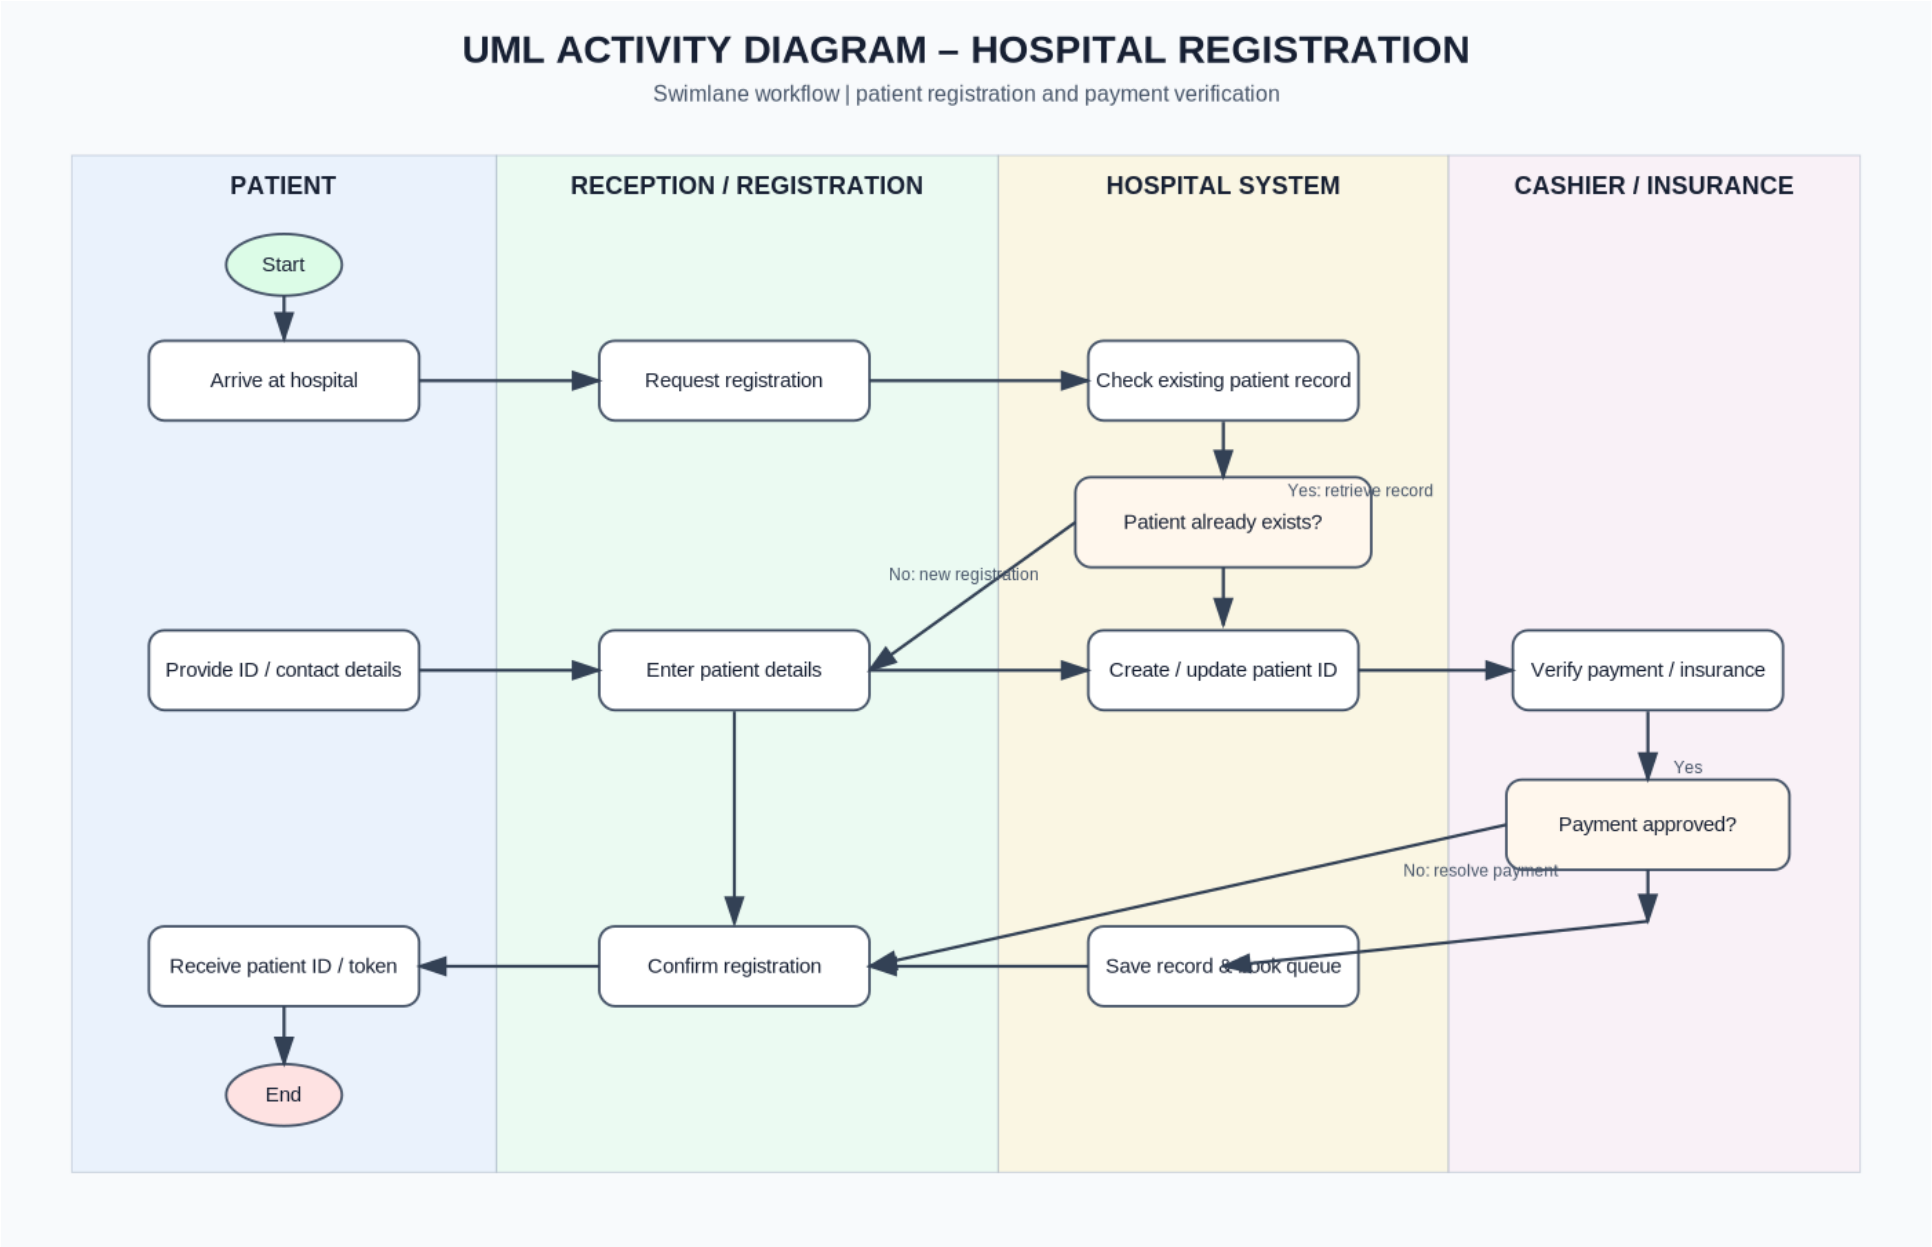

What to explain in viva: Explain patient-centred care, EHR, lab/radiology/pharmacy integration, interoperability (HL7/FHIR), privacy, consent and security.

2. TOGAF – Banking Domain

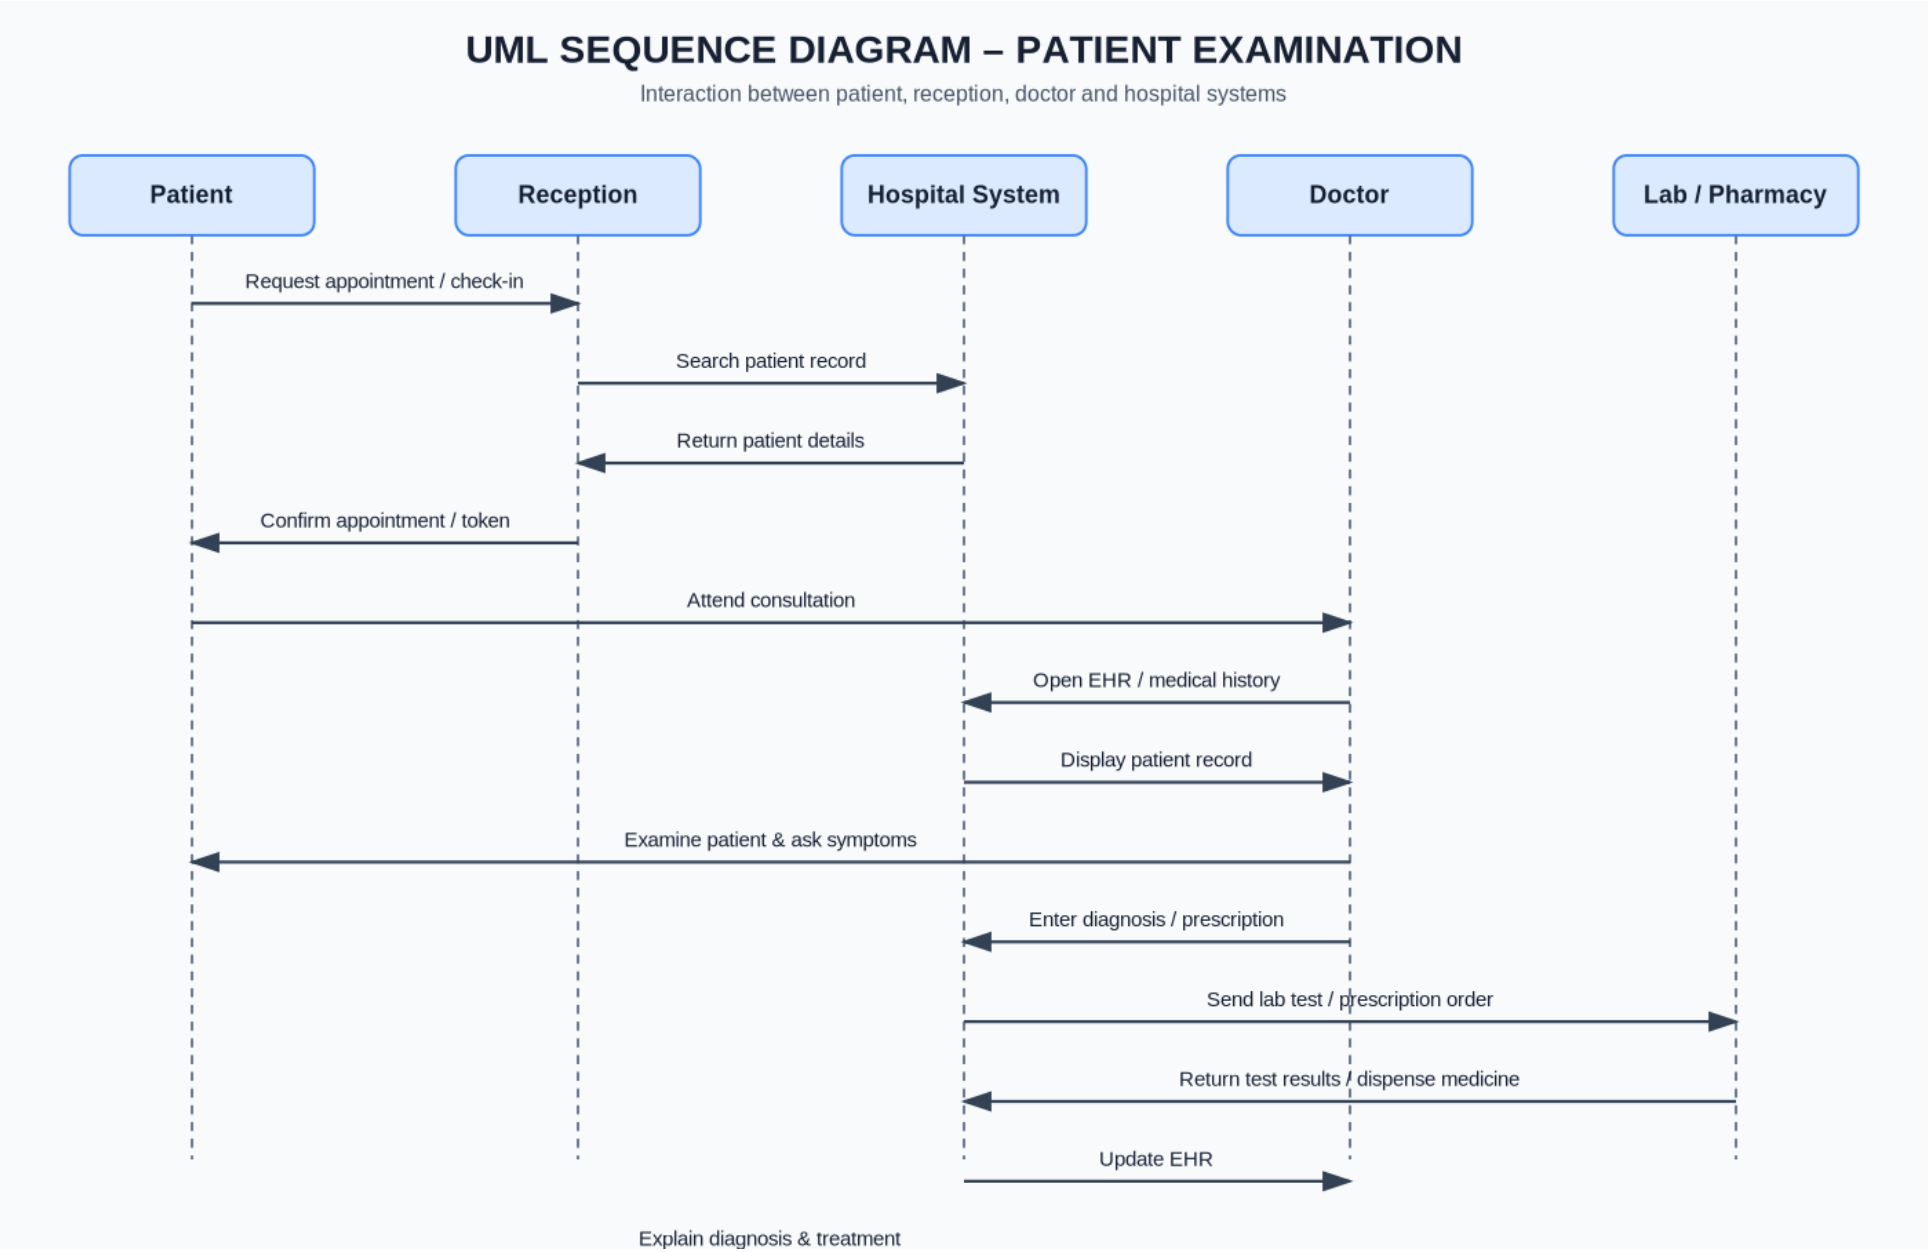

What to explain in viva: Explain core banking, customer onboarding, KYC/AML, payments, channels, transaction data, fraud monitoring, regulatory compliance and disaster recovery.

3. Hospital Registration – Activity Diagram

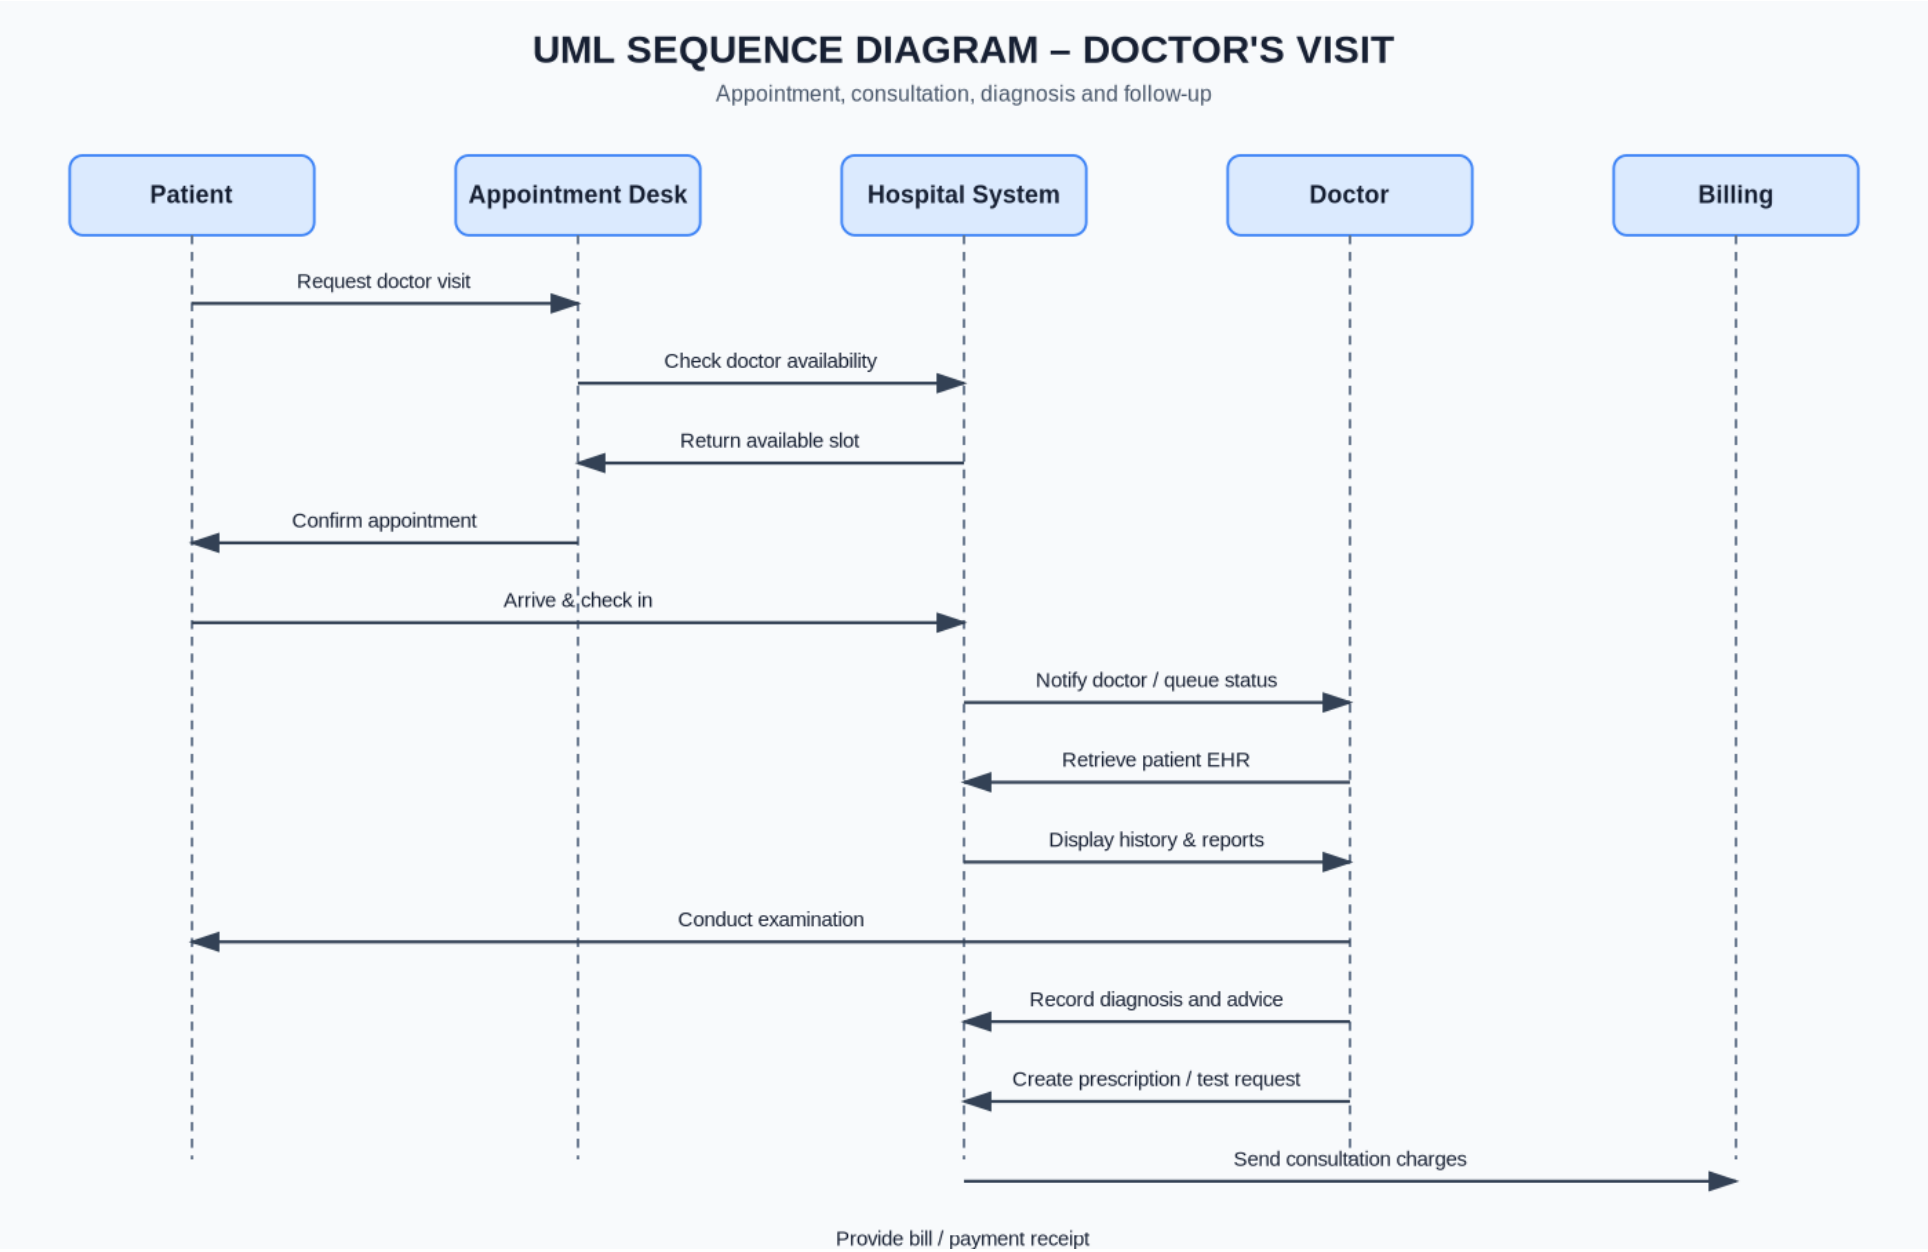

What to explain in viva: Explain start, patient arrival, registration, record lookup, new/existing patient decision, payment/insurance verification, record saving, token generation and end.

4. Patient Examination – Sequence Diagram

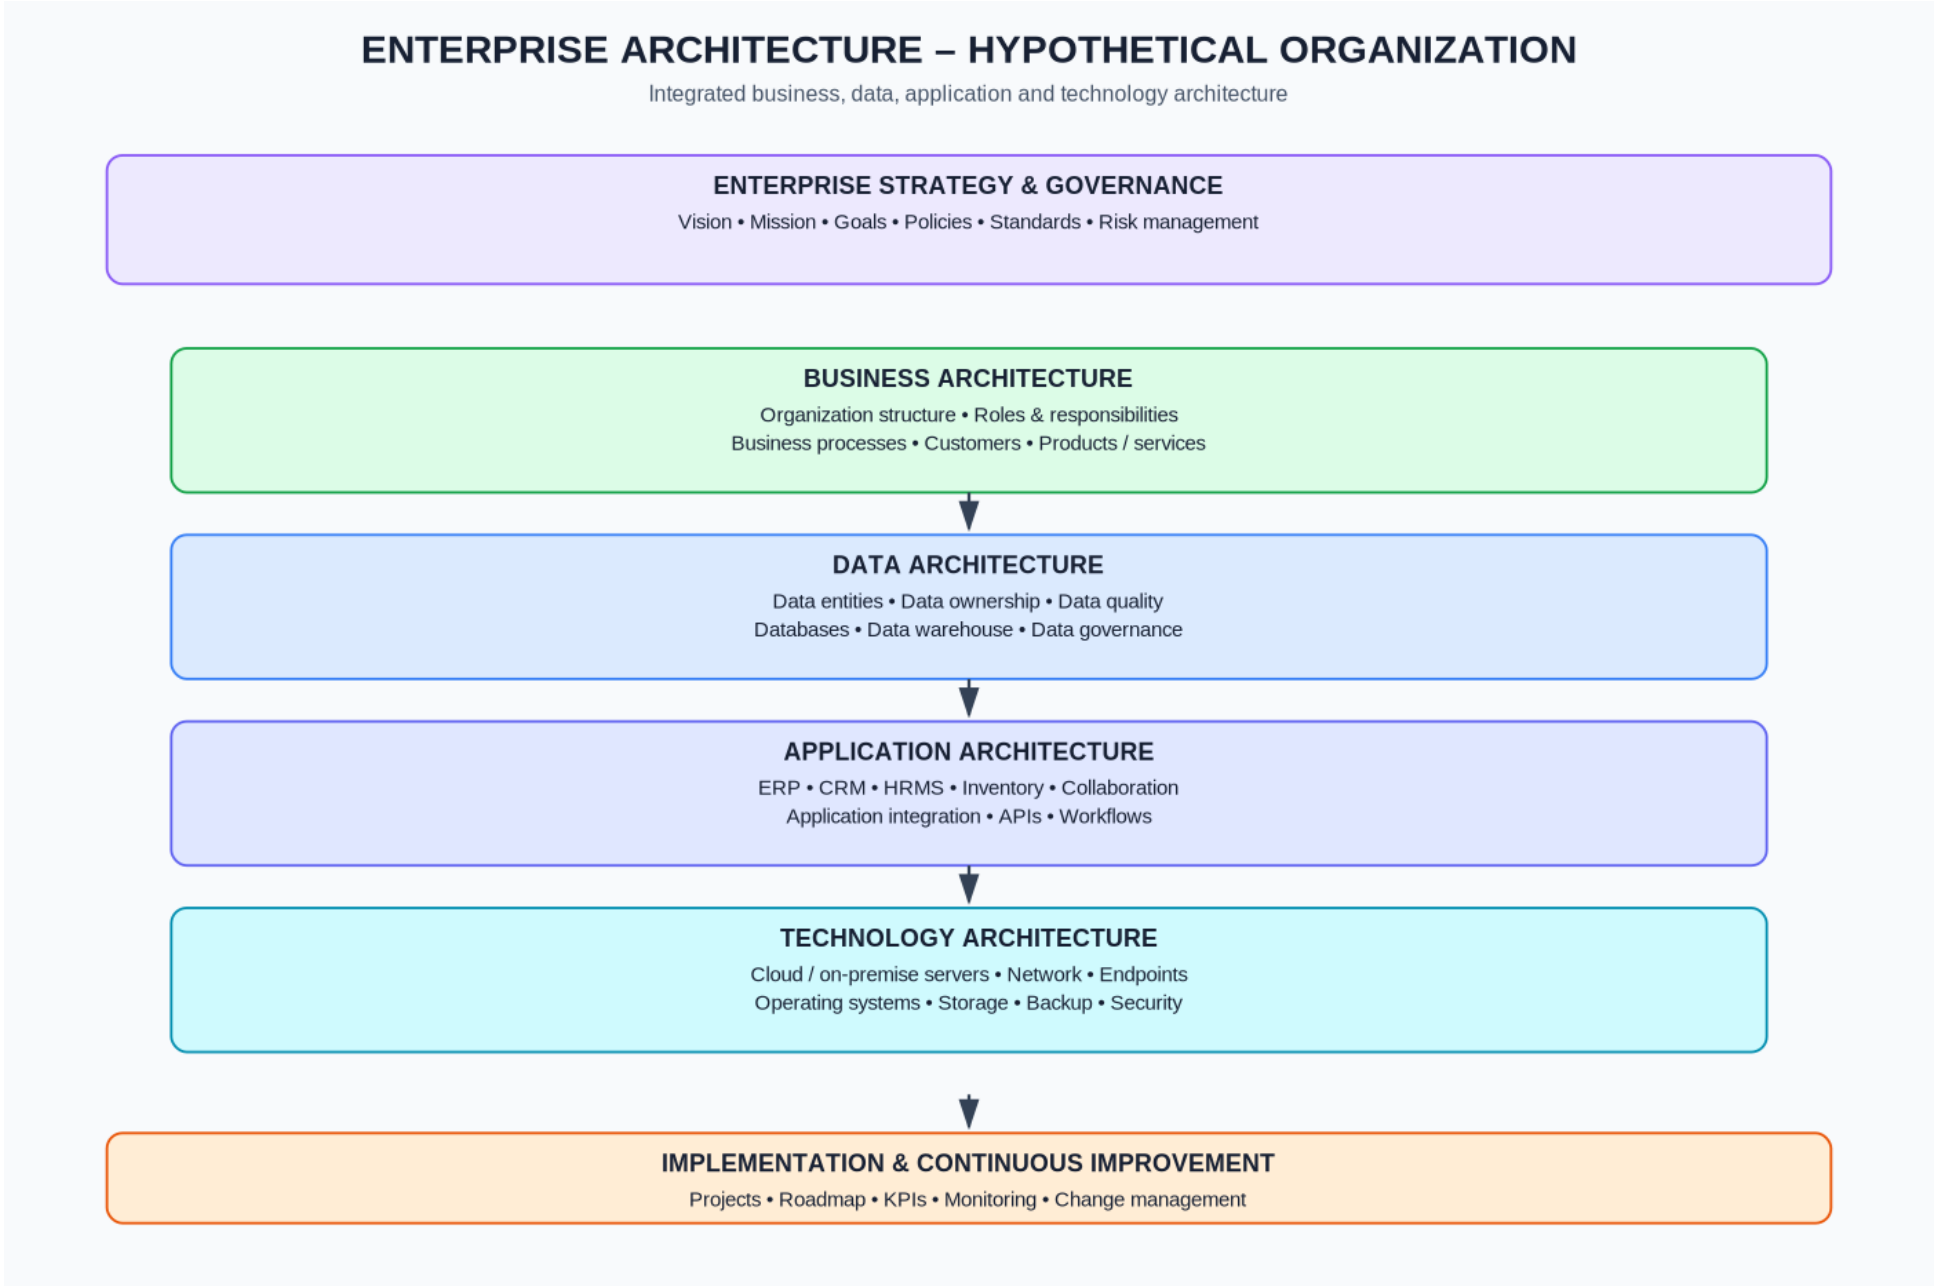

What to explain in viva: Explain time-ordered messages among patient, reception, hospital system, doctor and lab/pharmacy. Include EHR retrieval, examination, diagnosis, orders and results.

5. Doctor's Visit – Sequence Diagram

What to explain in viva: Explain appointment request, slot confirmation, check-in, doctor notification, EHR retrieval, consultation, diagnosis, billing and follow-up.

6. Hypothetical Organization – Enterprise Architecture

What to explain in viva: Explain strategy/governance, business processes, data, applications, infrastructure, security and continuous improvement.
